Komatsu Europe launches new sorting and demolition grapple range.

Vilvoorde April 2024 — Komatsu Europe is pleased to introduce the all-new sorting and demolition grapple range, the latest addition to the Komatsu attachments portfolio.

The new grapple range meets the customer's needs and the highest safety standards, with all grapples coming as standard with a load control valve included. The main areas of focus were on low maintenance cost and a long lifetime of the attachments. This was achieved using oversized pins and bushings, a robust double-walled main frame and perforated Hardox shells.

The sorting and demolition grapple range consists of 10 models.

“We can cover a wide range of crawler and wheeled excavators, going from 2,5 to 70 tonnes machine class” says Bastiaan Cassiman, Product Manager Attachments. “Their heavy-duty design ensures that they hold up in even the toughest conditions.” He concludes: “These grapples are designed to handle anything from primary and secondary demolition to recycling”.

These sorting and demolition grapples are the first of a complete range of demolition attachments which Komatsu will continue to introduce.

Key Sales Features

- Integrated mechanical end stops to protect the cylinder.
- Perforated Hardox shells as standard.
- Reversible Hardox 500 cutting edges with recessed bolts and nuts.
- Integrated load control valve.
- Double-walled, closed high strength frame.
- Oversized pins and bushings.
- Oversized slewing ring with internally mounted hydraulic motor(s).
- From the JRSG290-1 up, all models are equipped with dual rotation motors.

About Komatsu

Komatsu is an industry-leading manufacturer and supplier of equipment, technologies and services for the construction, forklift, mining, industrial and forestry markets. For over a century, Komatsu equipment and services have been used by companies worldwide to develop modern infrastructure, extract fundamental minerals, maintain forests, and create technology and consumer products. The company's global service and distributor networks support customer operations, tapping into the power of data and technology to enhance safety and productivity while optimizing performance.
