

Dash 5 Wheeled SKID STEER LOADERS

Powerful, efficient, and user-friendly, Komatsu's Dash 5 wheeled skid steer loaders feature operating loads ranging from 500 kg to 1470 kg. They display an impressive digging force and lifting capacity, and are perfectly suited for a large variety of jobs.

The KOMATSU engine supplies the machine with the required power, keeping the fuel consumption very low. Above all, to comply with the European STAGE 2 standard, it lowers exhaust emissions, restrains noise level and vibrations, while still ensuring excellent reliability and efficiency, weightlessness, compact dimensions and easy access for periodic maintenance.

The PPC servo-controls make these machines fast and easy to use and natural movements and unique efficiency come with minimum effort. The right joystick controls the arm and the bucket, while the left one controls the transmission.

The features of this machine give the user the opportunity to employ a wide range of attachments that can be used in different job sites. In the everyday use in farms, building yards, industrial environments or ports, the KOMATSU skid steer loader replaces the manual labour with unparalleled versatility.

The wide entrance and the unique internal room provide the operator with a level of comfort that is much above the average for this class of machines. Next, the ergonomic controls and the excellent 360° visibility make the job much easier and safer in any condition. On request, the machine can be offered with the exclusive front door and the side windows, as well as with heating or air conditioning for maximum comfort in every season.

The Dash 5 Skid Steer Loaders are equipped with the latest KOMTRAX[®] technology which sends machine operating information to a secure website utilizing wireless technology. Data such as operating hours, location and maintenance alerts are relayed to the web application for analysis. The KOMTRAX fleet monitoring system increases machine availability, reduces the risk of machine theft, allows for remote diagnosis by the distributor and provides a wealth of other information to drive business efficiency and productivity.
